

SIoux KILN CONTROL

Control your Precast Curing Process from Start to Finish

APPLICATION

Control your curing chambers with Sioux's kiln control for the Sioux Steam-Flo®. Control soak time, ramp up time and temperature, hold time and temperature, and ramp down time and temperature.

FEATURES

- Option to control up to eight curing chambers with one Steam-Flo®
- PLC & digital screen in electrical enclosure can be conveniently placed where you want, including with your plant's other control systems.
- Each zone can be programmed by Sioux with adjustable set points for:

Soak Time
Ramp Up Time
Ramp Up Temperature
Hold Temperature
Hold Time
Ramp Down Temperature
Ramp Down Time

- Data logger feature can be added to document humidity and temperature for DOT specs.

BENEFITS

With the Sioux Kiln Control for the Steam-Flo®, you can make sure your precast products are consistent for each curing chamber. This means the quality of your precast products can meet your customers' specs.
